Anyware Video at CABSAT 2018 showcasing its flagship IP & 4K product line

United Arab Emirates: 12 December 2017: The French company is proud to share its latest success and technological advancements at CABSAT. Thanks to its state-of-the-art R&D, its flagship product line supports all the newest broadcast standards, for the deployment of 4K/full-IP/Ultra-HD channels. It offers broadcasters the capability to harness the full power of IP based workflows while working with top of the line UHD media and codecs. Anyware Video will demonstrate its products at Cabsat, Booth ZB6-D50 on the Creative France Pavilion.

Empower your playout with OneGenie® 4K HDR

OneGenie®, one of Anyware Video's flagship product, has been deployed in SD, HD and Ultra HD. Automated, operated and monitored through a web client, OneGenie® has been designed to guarantee fully distributed architectures, with remote operation and system virtualization. Thus not compromising with performance and security, since it can be set with 1+1 or n+1 active redundancy and provides complete range of broadcast quality monitoring (SDI, SNMP...).

Grasp the future with Anyware Video full IP Solutions

From complex IPTV architecture running through several continents to WebTVs broadcasted through platforms like YouTube or DailyMotion, Anyware Video's expertise of IP Playout has been used for many projects. The team has recently also deployed full architectures on the Cloud through OneGenie® IP, a field proven IP multichannel.

Optimize your Ingest, Playout and OTT workflows

Through multiple projects, the architectures are designed for all sizes. Ingest is part of it, notably with the video server DubMaster® 4K, that offers the possibility to capture video content and to broadcast it in multi-format thanks with the 8 SD and/or HD channels. Specially designed for the TV channels, it is well integrated with the solutions that are already being used in the master control room and handles a set of tasks in the broadcasting process: capture and playout, TimeDelay, cropping and automatic montage of the programs of your AsRuns (automatic generation and transfers to the telecommunication operator or the Catch-Up TV websites). It allows the automatic generation and the streaming of lower-resolution copies (WMV synchronous to the media used for the playout: MPEG, DV, MXF, XDCAM,...). DubMaster®, a thought for the broadcast firms that want to go beyond the constraints.

"CABSAT is an unmissable event for Anyware Video. The dynamism of the region and our relationships with the local broadcast professionals are very strong. We are honored to participate to CABSAT and continue to strengthen our activities in the region and develop our working relationships with the very important network of broadcast professionals. Our recent development also allow us to be very confident on the compatibility of our product line, stronger than ever, to respond to the region's needs" said Vincente Charbonel, COO.
